R 爬虫及进行文本挖掘

周世祥

2020/3/22

数据获取方式

大数据时代,最不缺的是数据,数据就是黄金,就是石油,可是作为个人来说,获取数据并不容易,特别是有价值的数据。这个时候,爬虫就开始行动了,所谓的爬虫就是我们用编程语言写的程序,能够不知疲倦地替我们去广阔的互联网上替我们搜寻信息。你到一个陌生的地方,想找一个便宜的房子,从网上一个一个页面去搜索,太慢了,效率低。你想研究新冠病毒的发病模型,数据哪儿来,写个爬虫就替你做了。

如果你学过 Python , 一定听说过大名鼎鼎的爬虫框架 —scrapy [https://baike.baidu.com/item/scrapy/7914913?fr=aladdin].

框架的好处是方便,安装好了就可以用,代码量少,效率高,不好的地方就是灵活性不够,有些地方对用户来说不透明。对一些项目来说,我们用 R 的几行代码就可以自动化地采集数据。

当然学习爬虫需要先明确一些概念,比如,Http协议,静态网页和动态网页,json格式,selenium自动化测试。

静态页面和动态页面

静态页面并不是指没有动态效果的网页,现在的 H5 中 JavaScript 已经能做出漂亮的动画效果,静态网页指的是 HTML 网页在我们客户端请求时候已经客观存在于网页服务器上了。

动态网页是指在收到请求的时候,根据请求用服务器程序(PHP,JSP,ASPX)"动态"地生成 HTML 网页。比如,你上教务系统上查看自己的成绩,你只能看到自己的信息,你看到的网页和别人不一样。你用百度地图导航时,随着位置不同,地图需要不断更新。动态页面说到底,需要后台数据库服务器支持,数据必须不断更新。

尽管 H5 前端编程工资待遇不错的,然而只会前端,知识面太窄,很容易被淘汰的,所以现在有些机构美其名曰,全栈工程师,就是加上一些后端的编程技术进行补充。

H5 的流行是有道理的,在这个云时代,我们要转变思想了,不需要买强劲的服务器,阿里云,腾讯云,华为云都提供云服务,我们个人只需有一个终端就可以,这个终端可以是笔记本,手机等轻终端,我们可以把软件或应用部署在云上,终端上只需安装一个 web 容器就可以,这个容器就是浏览器,想想微软为什么要把 ie 集成到操作系统,就知道浏览器是互联网的入口。web 发展到现在,你可以感觉到,单机版的软件没有出路,PC 端的软件越来越少,连一个驱动精灵,替我们安装电脑驱动的软件都有 web 版了。现在我们上网课,数不清的在线直播平台,功能越来越强大。这里说马化腾引以为傲的微信,腾讯的核心产品,是一种不需要下载安装即可使用的应用,它实现了应用"触手可及"的梦想,用户扫一扫或搜一下即可打开应用。

web 的流行可见是有历史原因的。

web 页面的构成

web 其实就是 HTML 文件, HTML 文件由三部分组成:内容是什么,HTML 脚本,描述怎么样,即 CSS 样式,动作行为,即 JavaScript。JavaScript 对 HTML, CSS 进行操纵(增、删、改、查)。

如果程序能解析 HTML 结构就能控制页面,从而爬取相关的信息。

DOM 的结构

DOM 文档对象模型 [https://baike.baidu.com/item/DOM%E5%AF%B9%E8%B1%A1/6621083?fr=aladdin],是 W3C 组织推荐的处理可扩展标记语言的标准编程接口。前面讲到 web 页面由各种层次的标签元素构成的,随便找来一个页面源代码,你会看到最上层有一个 html,里面会有 head,title 等等标签,从数据结构上看,总体上看是一个树形结构,实际上,见过 markdown,latex,你了解到他们都是标记语言,结构都是类似的。这些结构不想我们的矩阵或 excel 表格那么工整,它们都是非结构化的数据,所以想提取信息,需要费点功夫的。

推荐一本好书《细说 DOM 编程》,兄弟连出品的,兄弟连在线机构,可惜在这次病毒流行中没能坚持住,倒闭了。

JSON

 ${
m JSON}$ 是什么,我们从网上收集的数据大多是 ${
m JSON}$ 格式,特别是通过 ${
m API}$ 方式,你可以把 ${
m JSON}$ 理解为一个格式化好的数据。 R. 语言中先安装 ${
m JSON}$ 包。

```
install.packages("J:/R课件/rjson_0.2.20.zip", repos = NULL, type = "win.binary")
```

```
setwd('J:/R 课件')
library(rjson) # 加载 rjson 包
result<- from JSON (file="input.json") # 这个文件提前下载好
print(result)
## $ID

```

我们看到 json 格式有点像 Python 中的字典,可以参考网站 https://www.runoob.com/json/json-tutorial.html。

Xpath 和正则表达式

##

##

##

##

Xpath 即 XML 路径语言,是一种用来确定 XML 文档中的某部分位置的语言,XML 文档是前面讲的 HTML 等超集。Xpath 基于 ${
m XML}$ 的树状结构,提供在数据结构树中找寻节点的能力。可以当作小型的查询语言。 ${
m R}$ 语言的 ${
m XML}$ 包基于 ${
m Xpath}$ 提供许 多功能函数,https://www.runoob.com/xpath/xpath-tutorial.html。

正则表达式用来检索某个模式的文本,R 语言的 XML 包基于正则表示式提供了 $\operatorname{grep}(),\operatorname{sub}(),\operatorname{regexpr}()$ 等功能函数,进行字符 串的模式匹配和索引工作。每一种语言都有正则表达式操作语法。

获取静态 web 内容主要使用 RCurl, XML 包。RCurl 包封装了 HTTP 协议接口,实现了 HTTP 的功能。本质上理解成一 个命令行形式的浏览器。

下面我们用R的包RCurl不打开浏览器,从网上下载信息。

```
library("RCurl")
url.exists(url="www.baidu.com") # 判断 URL 是否存在
## [1] TRUE
h<- basicHeaderGatherer()
txt<-getURL(url="http://www.baidu.com",headerfunction=h$update)</pre>
names (h$value)
## NULL
```

```
h$value()
```

上面的代码功能很简单,实现了查看服务器返回的头信息。

实现单页爬虫

Figure 1: xpath 查看

按浏览器的 F12 功能键进行调试。

实现单页爬虫功能

```
library("RCurl")
library ("XML")
url.exists(url<-"http://search.dangdang.com/?key= 统计 &act=input&page_index=1")
## [1] TRUE
myheader<-c("User-Agent"="Mozilla/5.0 (iPhone; U; CPU iPhone OS 4_0_1 like MacOS X; ja-jp)AppleWebKit/5
"Accept"="text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8",
"Accept-Language"="en-us",
"Connection"="keep-alive",
"Accept-Charset"="GB2312,utf-8;q=0.7, *;q=0.7")
# 这个地方是假装是有钱人,用苹果手机查看当当网信息,不容易被当当封网
webpage=getURL(url,httpheader=myheader, .encoding="GB2312") #RCurl 包的 getURL() 函数读取 URL 对应的文件为字
mode(webpage) #webpage 是个字符串
```

```
## [1] "character"

temp=iconv(webpage, "GB2312", "UTF-8") # 将编码转换为 UTF-8

write.table(temp, "temp.txt") # 输出一下 temp, 中文没有乱码,可以进行下一步工作

pagetree=htmlTreeParse(temp,encoding="UTF-8",error=function(...){},useInternalNodes=TRUE,trim=TRUE)

#XML 包的 htrePar 方法对 HTML 内容进行解析

mode(pagetree) #pagetree 是 R 内部使用的 externalptr 类型

## [1] "externalptr"

name0 <- xpathSApply(pagetree, "//*/a[@title]",xmlValue) #XML 包的 getNodeSet() 函数以 DOM 对 HTML 文档进行检

name<- name0[grep(" 统计",name0)] # 挖掘图书名

name<-name[1:60] # 发现有两个书没有价格

# 对 HTML 文档进行检索

comment<-xpathSApply(pagetree, "//*/a[@name='itemlist-review']",xmlValue) # 挖掘点评数量

now_price<- xpathSApply(pagetree, "//*/span[@class='search_now_price']",xmlValue) # 挖掘层书现价

statistics <-data.frame(name, comment, now_price)

write.csv(statistics, "J:\\R 课件\\统计学.csv")
```

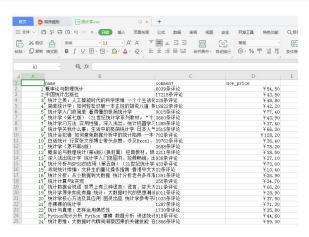

Figure 2: xpath 查看

下一步可以用正则表达式去掉评论中文本,只留下数值,价格中的人民币符号,只留下价格。然后做数据分析。 这只是从当当单页中收取 60 个商品的信息。研究当当网页变化规律,就可以修改程序连续爬取多页信息。

网络数据的应用级 API 采集 (以豆瓣为例)

API 是 Application Programming Interface 的缩写。具体而言,就是某个网站,有不断积累和变化的数据。这些数据如果整理出来,不仅耗时,而且占地方,况且刚刚整理好就有过期的危险。大部分人需要的数据,其实都只是其中的一小部分,时效性的要求却可能很强。因此整理储存,并且提供给大众下载,是并不经济划算的。

可是如果不能以某种方式把数据开放出来,又会面对无数爬虫的骚扰。这会给网站的正常运行带来很多烦恼。折中的办法,就是网站主动提供一个通道。当你需要某一部分数据的时候,虽然没有现成的数据集,却只需要利用这个通道,描述你自己想要的数据,然后网站审核(一般是自动化的,瞬间完成)之后,认为可以给你,就立刻把你明确索要的数据发送过来。双方皆大欢喜。

今后你找数据的时候,也不妨先看看目标网站是否提供了API,以避免做无用功。

应用级 (非数据库级) API 是软件或网站平台的开发方提供的数据查询通道,为了使用 API 首先要查阅 API 的帮助文档 (通常还需要注册开发者账号)。以豆瓣为例,其 API 帮助文档的官方网址为: https://developers.douban.com/wiki/?title=guide.

简单浏览 API 帮助,发现即使不注册开发者账号,也可以借助豆瓣 API 采集到想要的数据,例如在浏览器中输入 https://api.douban.com/v2/book/1220562.

即可返回编号为 1220562 的图书信息 (JSON 格式)。显然通过 RCurl 包可以以程序方式实现这个步骤,然后借助 rjson 包解析 JSON 格式的数据,即可获得我们想要的豆瓣网信息。这就是解决问题的关键思路。

还比如说从中国天气网 api 上:www.weather.com.cn 的获取天气信息。

"count": 6179,

##

```
Sys.setlocale(locale="Chinese")
## [1] "LC_COLLATE=Chinese (Simplified) People's Republic of China.936; LC_CTYPE=Chinese (Simplified) People
library("RCurl")
library("rjson")
url="https://api.douban.com/v2/book/20429677?apikey=0df993c66c0c636e29ecbb5344252a4a"
# 此处需要加 apikey,豆瓣疑下线所有公开 API,所有请求都会报 msg:"invalid_apikey",通过 imdb 号查豆瓣信息,这个需要研究研究
library(httr)# 它类似于 Python 中的 request 软件包,类似于 Web 浏览器,可以完成和远端服务器的沟通。
response <-GET(url, user_agent="my@email.com this is a test")</pre>
# 注意其中的 status 一项。我们看到它的返回值为 200。以 2 开头的状态编码是最好的结果,意味着一切顺利;如果状态值的开头是数字 4 頁
library(jsonlite)
##
## Attaching package: 'jsonlite'
## The following objects are masked from 'package:rjson':
##
##
      fromJSON, toJSON
toJSON(fromJSON(content(response, as="text")), pretty = TRUE)

2010年就在《经济学人》上发布了长达14页对大数据应用的前瞻性研究。\n维克托<U+2022>迈尔<U+2022>含恩伯格在书中前瞻
性地指出,大数据带来的信息风暴正在变革我们的生活、工作和思维,大数据开启了一次重大的时代转型,并用三个部分讲述了大数
据时代的思维变革、商业变革和管理变革。\n维克托最具洞见之处在于,他明确指出,大数据时代最大的转变就是,放弃对因果关系
的渴求,而取而代之关注相关关系。也就是说只要知道"是什么",而不需要知道"为什么"。这就颠覆了千百年来人类的思维惯例,
对人类的认知和与世界交流的方式提出了全新的挑战。\n本书认为大数据的核心就是预测。 大数据将为人类的生活创造前所未有的可
量化的维度。大数据已经成为了新发明和新服务的源泉,而更多的改变正蓄势待发。书中展示了谷歌、微软、亚马逊、IBM、苹果、
facebook、twitter、VISA等大数据先锋们最具价值的应用案例。"],

我们借助 R 语言程序正确地收集到了豆瓣网上我们感兴趣的信息。进步阅读 API 手册发现,更高级的采集功能必须注册开发者账号(甚至还有专用的 SDK 软件包),如感兴趣,可以课外自行进行更加深入的学习。另外,rvest、httr 等软件包也是 R 语言抓取网页数据的常用选择,rvest 包的帮助文档介绍是"容易地收割(抓取)网页",可见其功能之强大,强烈建议关注与学习!

以天龙八部作为离线文本数据

使用 jiebaR 分词包进行中文分词,去停用词。

构建词频统计表,最后利用 wordcloud 进行词云图可视化展示。

```
library(jiebaR)
```

```
## Loading required package: jiebaRD
```

```
#if(!require("wordcloud")){install.packages("wordcloud")};
library(RColorBrewer)
library(wordcloud)
engine<-worker()</pre>
# setwd("D:/R/test")
xajh<-read.table("天龙八部.txt",header=F,sep="\t",colClasses="character")
words <- engine <= xajh$V1
words1<-unlist(words)</pre>
words1<-words[words!=""]</pre>
words2<-words1[nchar(words1)>1 & nchar(words1)<7]</pre>
wordFreq25=sort(table(words2),decreasing=T)[1:25];wordFreq25
## words2
